Chapter 1

Coordination

Anne Abeilé and Rui P. Chaves

Université Paris-Diderot[1], France & University at Buffalo, SUNY[2]

Abstract goes here

1 Introduction

2 Coordinate Structures

Basic issues pertaining to the syntax of coordination (headed / headless, asyndeton, monosyndeton, etc., weak head/marker discussion). See Stassen (2000), Haspelmath (2000), Scott Drellishak's HPSG work), Mouret 2007, and Bob Borsley's work.

3 Clausal coordination

(including incidental coordination, and symmetric/asymmetric coordination, identity constraints across conjuncts; include comparative correlatives (Abeillé, Borsley 2008) which are coordinate in some languages, subordinate in others)

4 Phrasal coordination

4.1 VP coordination

4.2 N-bar coordination

(Boolean, and non-Boolean; agreement resolution, + 1st conjunct)

4.3 NP coordination

(Boolean, non-Boolean, etc. agreement resolution, 1st conjunct agreement)

4.4 Coordination of unlike categories

(survey of extant accounts: ellipsis (Yatabe, Crysmann, Beavers and Sag, Chaves), underspecification (Sag), lattices (Levy and Pollard), and semantics (Chaves))

5 Lexical coordination

(including coordination of word parts, Abeillé 2006, Chaves 2008)

6 So-called Non-constituent coordination

(Brief discussion about RNR (Chaves 2014, Abeillé et al.), Gapping (Chaves 2009, Abeillé et al. Park 2018), LPE (Yatabe, Crysmann, Beavers and Sag, Mouret), and Stripping; deferring analysis to ellipsis chapter by Kim and Nykiel)

7 Conclusion

Conclusion here.
